

ORTHOPEDICS

All the **RIGHT** moves.

THE ORTHOPEDIC SURGEONS at The Orthopedic and Neurosciences Center are committed to providing high-quality orthopedic care to help you get back to your optimal level of physical function.

Our Services

The orthopedic surgery team works together to provide the total hip and total knee replacement surgery that's right for you. To ensure a smooth surgery and recovery, they use nerve blocks to help reduce pain. In addition, they are experts in computer-assisted navigation, which allows for smaller incisions and less post-operative pain. The surgeons are trained on new knee replacement technologies: Visionaire, Materialise, and DePuy TruMatch.

Why Choose Us

With orthopedics, imaging, and therapy services in one location, we can treat you from initial consultation through recovery. Because the orthopedic surgeons work together as a team, they can collaborate on the best way to handle every aspect of your procedure.

You'll experience one-on-one care with your surgeon. You're not a number; you're a person, and your surgeon wants to see you through a successful treatment plan. And with the patient education we provide, you'll have a complete understanding of what to expect before, during, and after surgery.

The orthopedic surgery team is trained in the latest in knee replacement technologies: Visionaire, Materialise, and DePuy TruMatch.
