

GET on a PAIN-FREE course.

OUR PAIN MANAGEMENT PHYSICIANS have a unique understanding of pain and how it affects your life. Starting with a comprehensive evaluation, they use interventional pain management techniques—including the latest treatments and technologies—to help you manage all types of pain.

We can help manage:

- Neuropathic pain
- Back pain
- Arthritis pain
- Head and neck pain
- Degenerative disc disease
- Osteoporotic and malignant compression fractures of vertebrae
- Sacroilitis
- Sciatica
- Shingles
- Spinal stenosis
- Post-herpetic neuralgia
- Complex regional pain syndrome
- Shoulder, elbow, hip, and knee pain
- Myofascial pain
- Carpal tunnel syndrome

Why Choose Us

Our physicians are fellowship-trained in pain management. They work alongside top-notch nursing and rehabilitation staff to find what's causing your pain and treat it.

Our comprehensive approach to treating pain lets us look beyond the pain to see how it's affecting your life and how we can use advanced interventional methods available here to make you feel better—physically and mentally.

Pain management now offers vertebral augmentation, a less invasive treatment for vertebral compression fractures.

We understand what works for one person won't necessarily work for you, so our physicians and staff will work with you to find the right treatment to your pain.

Our Services

Through interventional pain management, we want to help you get to the point where you can manage your pain at home.

Some of the treatments used include nerve blocks for face, neck, and back pain; vertebroplasty and kyphoplasty for fractures, and spinal cord stimulation for chronic pain. We also provide medication recommendations to maximize conservative therapies. Plus, we perform injections for pain relief and radiofrequency ablation for longer-lasting pain relief.
