

# WORK *IT* OUT.

**I**N SPORTS MEDICINE, we can handle all of your non-surgical orthopedic issues, such as osteoarthritis, sprains and strains, and fractures.

### Why Choose Us

Our comprehensive treatment of non-surgical orthopedic conditions allows patients to be seen in one location for a variety of issues. Everything from imaging (X-ray, MRI, CT) to rehabilitation is available right here.

By focusing on patient education, we help ensure that you understand your diagnosis and what treatment options are available. We'll also review your imaging tests and provide additional materials to help you make the best choice for your care.

Our medical assistants, who are certified athletic trainers, help provide significant training for home rehabilitation when appropriate. We also work with physical therapists here at The Orthopedic and Neurosciences Center when more comprehensive rehab is necessary.

In addition to the one-on-one care we offer in sports medicine, we work with other departments at The Center to provide the best treatment and rehabilitation possible.

### Our Services

Our fracture care includes the option of water-proof casting material. We are fully stocked with splints, slings, braces, crutches, and walking boots.

We perform soft-tissue and joint injections, including hyaluronan (Synvisc, Supartz, Orthovisc) for knee osteoarthritis. In addition, we offer exertional compartment testing in the evaluation of activity-related leg pain.
